

Jan Martin Smørdal

*Snip-pets*

guitar duo  
for Frevo

## Notes and preparation:

- "Cross-string", guitar II prepare guitar as follows: Loosen high E-string and B-string and change nut-position for the two strings - B-string below. Then tune up strings to E and C (high to low) *while gently pressing down the 13th fret*. This will result in fuzzy sounding C#, when playing open string(s). Both strings will be treated as one.

- Left hand mute. Notes indicate strings.  
If possible: prefer first position. If accented: slap string to fretboard

- Harmonic, sounding pitch. Prefer open strings.

- Same as above, but specified (from high to low):  
pitch produced - harmonic placement - open/fretted root (in parenthesis).  
The pitch produced is not always notated.

- Right hands index and middle fingernail-trill/tremolo on muted string (here: B), i.e use back-side/"wrong side" of fingernail. Dynamics will somewhat dictate speed of trill.

- Same as above, but performed as a glissando.  
In this example: from neck position to bridge position, counting 2 seconds.

- Quarter tone: Pre-bend string.

⑥

- Dictates string. In this case: low E string.

- T = Right hand tap. IT = Left hand tap.

- "Super tasto": while holding a C on the high E-string, use one of left hands spare fingers to snap string on "fret-side" of string, in addition to the ordinary C. The plus symbol is used for this, and indicates the approximate sounding pitch. Super tasto are always performed as *loud as possible*, independent of dynamics for the "right-side" of string.

- Nail sounds/tiking sounds: use *i m a c*, "attach" string underneath nail, where nail meets finger. Pull off one finger at a time as hard as possible starting with *c*, muting the remaining. The very small notes indicates this technique, and which string to perform on - here: E. The short crossing lines indicates relativ hand-/nailplacement: upmost = near bridge, downmost = on fretboard.

- Whenever this specific chord is played, mute A-string.

slow motion  
rasg.

- Nail sounds: hit strings as a slow rasguado while muting strings, making a "rain" of high pitches. To be played about 5 cm from bridge.

Ti

- hit strings near bridge with a straight index finger (you might add middle finger, or replace with thumb - prefer index finger)

## GENERAL REMARKS

The flageolette-themes rhythms (from first page) are to be interpreted rather graphically. This theme should keep the exact character each time it appears. Also, measures 77 through 85 are also to be interpreted more graphically than exact.
